

“The Fourth R”

Selmer Bringsjord and Allan Silver lead talk designed to settle the issues of the day via implementation of. . .

THE VULMAN CREED

1. Some propositions are true, some are false, but there's nothing in between. (This is known in Logic as *the law of the excluded middle*.)
2. We attempt here to establish true propositions via logic; emotion, personal preference, political in/correctness, political party or ideology, rhetoric, religious dogmatism, financial gain or loss, etc.—all such stuff is for us utter garbage.
3. Rationally rejecting our *modus operandi* is self-refuting, because such a rejection must be logical, and hence must affirm precisely what we stand for.
4. Logic is apparently in *very* short supply these days. (It's possible to obtain an undergraduate degree from even an elite university without taking a single logic course, so it's no wonder even educated folks, for the most part, can't reason in the slightest.)
